

WASTE CONNECTIONS

Connect with the Future®

November 14, 2018 | For Immediate Release
Receptacle Comparison Graphics, City of Cameron Residents

Below are graphics to present a visual aid in the differing sizes for trash receptacles, and the comparative capacity of the ninety-six Gallon poly cart provided to the City of Cameron residents.

Here are three varying sizes of trash receptacles one might find inside a home or small business:

7-10 Gallon 12-16 Gallon 20-30 Gallon

The 20-30 Gallon container pictured to the left is slightly smaller than the typical 32 Gallon container pictured below in gray. The 32 Gallon container is generally what is used for exterior trash collection.

As an additional point of reference, the green, 32-36 Gallon trash receptacle pictured on the right, is what one might find outside of a business center or in a park or sport field.

32 Gallon

32-36 Gallon

The Waste Connections ninety-six Gallon poly cart is equipped to provide greater capacity and service in one container, than the aforementioned containers.

96 Gallon
